At the meeting of the Natural History Society last Wednesday evening, Prof. Herbert Williams gave an interesting talk on the additions to Michigan flora since 1892, from which the following facts were taken:

The first collection of Michigan plants was made in 1835, which contained 371 species. Nothing more was done in this line until 1892, when a second collection was made containing 1,100 species. Previous to 1881 there was no flora of the whole state. In that year 1634 plants were reported. The next report, in 1892, showed that there were 1746 plants in Michigan, and since 1892, 230 new plants have been found, making at the present time 1,976 plants in the state.

Of the 230 new plants, 47 have been introduced from Europe, coming from the west, 61 from the south, and 33 are varieties of former species. Of the 230 were found in the upper peninsula. Thirty-five of the 230 are weeds, and one is a tree—a hybrid oak, found in the county of Washtenaw. The next three fer-
tilizer plots, combinations of two, as follows: nitrogen and phosphoric acid, nitrogen and potash, and potash and phosphoric acid. These will be followed by a plot treated with complete fertilizer; nitrogen, phosphoric acid, and potassium. The experiment then may be continued by testing stable manure, commercial fertilizers, and other applications.

As a basis for comparisons, and as a check on the inequalities in the soil that might arise, several "nothing" plots on which no fer-
tilizer is applied should be inter-
spaced.

By this arrangement the Experi-
ment Station furnishes the fertilizer and seed delivered at the railroad station nearest the farm where the experiment is to be tried, and super-
ceeds the intentions of the fertilizer, sowing of the seed, and harvest-
ing the crop. The farmer conduct-
ing the experiment will prepare the ground, care for the crop, and assist in applying the fertilizer and harvesting and weighing the crop. If a crop is harvested and half of the results are secured the crop will belong to the farmer conducting the experiment. The crops tried will probably be corn, potatoes, sugar-beets or turnips, and beans.

Farmers in the State wishing to try the above experiment will please consult the experiment. The crops

Besides the above experiment 

Agricultural College, Mich.
the surrounding hills, gave one an impressive picture. In an hour up on the crowded streets, we saw, be- side our own railroad, another, a tremendous car drawn by six horses in tailed fashion. The two ugly-looking drivers wearing broad-brimmed hats, long black coats, high, white top hats, and carrying black-snake whips, rode upon the mule's backs. These men proved to be "Typical Southerners."

We soon left Cincinnati by the Quarterdeck Crescent, and we arrived in Philadelphia by way of Juneau, the largest city on Lake Superior. It was during this ride, only 20 miles distant, that we were asked to spend some time at home, which we did, visiting many hotels have. I had a fine experience, and the fog that day was very heavy to carry up mountains, I was well paid by General John C. Frémont, who was a very fine man. We spent a few days in Atlanta and a week in the city, where we met many old friends, but it was during our visit to Atlanta that we saw the most interesting things. The highest mountain we visited was called "M. Yonah." An outline of the mountain is as follows: Early breakfast; ride to the foot of the mountain; four hours of fatigue, hunger and danger in ascending the rocky side of the mountain; a short time in the city and saw, among other things, many fine buildings, the most interesting being the United States mint. We next took a delightful day-light ride through the Blue Grass section of Kentucky, and the whole country presented a beautiful appearance. We passed through many towns, including the towns of Harrodsboro and Bowling Green and very near the Mammoth Cave. We also saw many national cemeteries and other historic places, which mark the place of a struggle between a noted Confederate and a Union soldier.

After dinner in Louisville, we took a fast train for Cincinnati, Ohio, a distance of only 20 miles. It was a short way out from Louisville, where I saw what was the most beautiful agricultural scene I have ever seen. The land was level; there were large well-kept buildings, and the entire premises presented neatness and order. The whole country, as the sun shone, gave me the appearance of a perfect landscape picture with the car window as the frame. This did not last long, however, for on the way we passed through towns where I was often in sight from our car window. The train soon brought us to Cincinnati, where we found the climate was very pleasant. The rest of our journey, the climate continued to be very cold.

After visiting Chattanooga, we left for Nashville, arriving in the city, where we spent a few days. We next visited Augusta, Georgia, and the whole country presented a very interesting sight, as most of these historic buildings are now destroyed. From my diary, I recall many interesting experiences, but space will not allow of their mention.

On one day we visited an old plantation-house with two-story verandas, large pillars, and big, out- side chimneys. This was a very interesting sight, as most of these historic buildings are now destroyed. From my diary, I recall many interesting experiences, but space will not allow of their mention.

The Round-up Institute at Pontiac the first three days of March was devoted to the promotion of the study of agriculture and the encouragement of the farm communities in the adjacent territory. Industries that had long interested farm communities were emphasized; the future of sheep husbandry on the wool producing farms of Berrien and Wayne, Kalkaska and Monroe. The attendance of delegates from the State at large was good, there being representatives from counties as wide apart as Berrien and Wayne, Kalkaska and Monroe. The attendance of farmers was all that could be expected and Oakland county maintained its reputation for opportunities of this kind.

The Women's Section of Round-up, by P. S. Rose; the women's department, by Teresa A. Bristol. Both young men are members of the farming and literary societies, and Miss Bristol is a member of the Ferronian Society.

The M. A. C.
Special Hat

Is now on sale; much nicer hat than last season; better material and workmanship; the price remains the same, Fifty Cents.

If you want up-to-date neckwear I would have great pleasure in showing you the most complete line of natty ties in Lansing.

Sweaters, Golf Hose, Caps, Hats and Shirts are lines in which I lead.

Students' patronage respectfully solicited.

Elgin Mifflin, The Outfitter.

The Celebrated ROYAL SHOES

We have secured the exclusive sale of this celebrated line of Men's Five-Shoe for Limited Time only. These shoes are made in all styles and all colors at the limited price of Three Dollars and Fifty Cents.

They are without doubt one of the best special lines of shoes made and are crowding out many of the Five Dollar lines wherever introduced.

G. D. Woodbury's NEW SHOE STORE, HOLLISTER BLOCK.

NOTICE. These shoes are now coming in and we will soon have a complete line in all styles.

R. B. Shank & Co., Leading Grocers and Confectioners.

All Meats....

May look alike to you, but there is a very great difference in the quality we handle and that sold by some other markets. We handle none but the very best. Like the good things of life, the good cows is in the eating. A trial will convince you that you ought to trade with us.
