A crowd of 250 students accompanied the team on its trip. Hillsdale played a good game and made things lively. Hillsdale simply had the ball, and M. A. C. could not be heard but M. A. C. yells and cheers. Hillsdale kicked off and M. A. C. secured a touchback, and without losing the ball in about four minutes. Hillsdale now had the ball but fumbled Hillsdale from much larger spot and ran 75 yards for the second touchdown. Time of play, one minute. Hillsdale never held for downs and never made the desired 5 yards in the first half. Bowry was the only Hillsdale player to make any gains at all and he made 10 yards in two plays. This was the only time that Hillsdale made 5 yards in three downs.

McKenna made the third touchdown by hurling the line; the fourth was secured on a quarterback kick, and Bowry and Bell on the ball behind the line. Smith Peters to M. A. C. netted 45 yards, the third good gain of the season. The fifth was gained through the line. M. A. C. must win and every student should try to encourage the team. Albion will send a large delegation of roosters including a number of citizens. It will be the big game of the year as far as the College is concerned. Mass meetings will be held Wednesday and Thursday evening in the chapel to practice songs and yells. Come out and do your part.

Y. M. C. A.

Mr. W. Merrick led the Thursday evening prayer meeting. Theme for discussion: "Danger in Delay." The interest was very good, and discussions were sustained and the attendance good.

Dr. R. C. Dodds of the First Presbyterian church, Lansing, conducted the Sunday morning chapel services. Text: 1 Cor. 3: 21. Therefore let no man glory in men, for all things are yours." Dr. Dodds brought out the idea that no one could possibly be anything without the highest sense of the term, who did not or could not make it useful in promoting a higher and the highest well being of the so called possession. In this higher sense of possession the child of God possesses all things. The service was well attended.

The Sunday evening meeting was addressed by the state geologist, Dr. Lane. His theme was "Uncertainty and Its Place in Human Experience." The address was very interesting. Dr. Lane showed that a tinge of uncertainty is always necessary to give interest to any phase of life. It is the element of uncertainty that makes hope possible, and without hope the human life would be reduced to its lowest form, in fact without it man could not exist. The chapel was crowded, giving a hint that it is too small for not far distant evening meetings.

Y. W. C. A.

The Thursday evening prayer meeting was conducted by Miss Irene Waye. It was a recognition prayer for incoming members at which they gave scripture quotations in response to roll call. The Bible lesson has to do from the 6th chapter of Ephesians.

LEcTURE.

Do not forget the lecture next Friday evening in the A. B. Lightfoot. It will be interesting and instructive. The lecture is free to all and the chapel should be full.

BASKET BALL.

All students interested in Basket Ball are requested to meet in the Y. M. C. A. rooms on Wednesday, November 11 at 7:30 p.m. Practice will begin as soon as possible. M. A. C. had a championship team last year, won every game and prospects are good for a similar team this year. Mr. E. Ballbach is the captain.

BIBLE CLASSES.

The Y. M. C. A. is giving excellent opportunities for Bible study this year. The following classes are arranged and are open to any and all students. In "The Life of Jesus" there are three lessons. Every M. A. C. had a championship team last year, won every game and prospects are good for a similar team this year. Mr. E. Ballbach is the captain.

Mrs. P. B. Woodworth has been spending some time in St. Louis, Mo., taking care of her brother, Edward Hale Clute. M. A. C. people are sorry to hear of his death on Oct. 31st. Mr. Clute was a special student at M. A. C. in 1892. After that he taught for a time at the Lake City, Florida. The Woodworth extends sympathy to the friends and relatives.

S. F. Scott is assistant to Prof. Prescott in the chemical laboratory at the University of Michigan.

With '94.

Frederick B. Phillips is engaged in the manufacture of store fixtures in Detroit. He is to be married on November 18th.

With '95.

Henry Colpi is engaged in electrical engineering in Detroit. He is one of the proprietors of an engineering firm that is located on Jefferson Avenue.

A. C. MacKinnon of the firm MacKinnon Manufacturing Co. of Bay City called at M. A. C. last Friday, Mr. MacKinnon had been on a business trip through central and southern Michigan. The firm employs 100 men and is doing a large business. They manufacture machinery and take contracts for farm factories and other establishments. "Mac" is married and has a pleasant home at 304 N. Sycamore St., Tecumseh.
THE M. A. C. RECORD.

TUESDAY, NOV. 10, 1903.

COUNTY Normal Training Schools are being instituted throughout the state. They undoubtedly result in much good providing suitable instructors can be secured. One District is certain, a good teacher cannot be retained for board, room and washing. Salaried must go up. A lamentable thing about these schools is that no provision has yet been made for teaching the elements of agriculture. Bailey says that one-third of our people live by the pole, and the other two-thirds live because they follow that noble occupation. Agriculture is the oldest art, but the newest science. Its possibilities in Michigan have not been exhausted by one-half. What a glorious thing it would be if the rising generation could be given a desire to investigate this art from a scientific standpoint. Let the teacher of science in those training schools be a young man who knows not only science, but also applying his lessons to the farm, livestock, the dairy and fruit culture. Pres. Snyder advocated this very strongly in an address before the Schoolmasters' Club last year, and it is now up to the state authorities to act.

GENERAL TEACHERS' MEETING.

Several years ago Pres. Snyder inaugurated a scheme by which the entire teaching force should meet at stated intervals for the discussion of general interest. At these meetings some one department was to give an address indicating the progress of the work, methods of presentation and general aims. At the meeting last Tuesday the latter was given by Prof. W. O. Hedrick of the department of history and economics. It centered in the discussion of the subjects of history, civics and political economy. He stated that at the present time historical perspective is seldom considered at M. A. C. It is presumed that the student is interested in the final results. The general scheme followed to develop this insight into present day civilization is to trace its lines of growth through the peoples of Western Europe and America. It is supposed that modern history is more important to the student than ancient. Here English history is given, then thirteenth century history, sixteenth century history in the Sophomore year, early European in the Junior, and United States Constitutional history in the Senior year.

The German method is largely used in presentation. Records of Congress and of the constitutional and state conventions, presidential messages, state papers, contemporary newspapers and private correspondence—all well arranged for studying purposes are everywhere at the student's disposal. Reference books are numerous and recitations upon these are required the same as upon the textbook.

Political science is taught for two terms, one term to juniors and one to seniors. In the direction of the part from the whole, from the particular to the general, has no one teaching civics, the student has heard of the doings of Congress and the President and in these he becomes interested and feels at home. Hence, the student begins not with the highest forms of government but with the more primitive relations of the people. He is presented with the lowest type like the school district, with but one individual representing the whole, yet he begins to think and to act.

The bond of harmony in all the sciences is called a commodity, and the fact that the student always tried to lend a helping hand and was kind, she was one of the most popular girls in College. She was a member of the Feronian Society and leaves an account of these traits of character and the fact that she is interested and feels at home.

The college community was greatly shocked by the telephone announcement concerning the sudden death of Miss Rubie E. Light, class of 1902. Last Thursday Miss Light was called to the grave by her father from Saginaw. He requested her to come home on Friday to see some friends who were paying them a visit. Miss Light left on Friday and wrote on her card that she would return to 10 a. m., Nov. 11. Mr. Light, who is a dentist, had been ill for some time, was very nervous and seemed to be at times mentally unbalanced. He probably became violently insane Sunday night and at some time that night fatally wounded Mrs. Light and shot Rubie, who had presumably fled to the kitchen, so that death was almost instantaneous. He then committed suicide by taking poison. Letters indicate that the whole affair was carefully considered and all details arranged some days in advance.

Miss Light was well and favorably known to everybody at the College. She was a young woman of excellent character, had a very sunny disposition, was genial and good natured all the time. On account of these traits of character and the fact that she always tried to lend a helping hand and was kind, she was one of the most popular girls in College. She was a member of the Feronian Society and leaves an account of these traits of character and the fact that she is interested and feels at home.

The lecture system in this awful tragedy is Miss Light's past life. She died about her a ray of sunshine and left behind her a record of deeds on which memory loves to dwell.

Lansing, Mich.

ABOUT THE CAMPUS

Miss Ruby Newman spent Sunday at her home in Portland.

Mrs. Pratt of Middletown has been visiting her daughter at M. A. C.

The farm department has a fine crop of mangles. 75 tons have been exchanged some 15 varieties of Mangoes.

The distribution of forest trees in the rural districts and regularly affects some but not seriously so far.

The College farm has about 148 acres of hardwood forest. It is under the control of the department of forestry. The timber is cut at a certain rate but not to exceed the total number of male students who were admitted or left out entirely in the construction of new buildings. There are about 250 creameries in the state but they handle only a quarter of the butter. Michigan could easily support 1000 creameries.

Miss Ruby Newman was读 on account of the death of his father. The College community hereby extends sympathy.

The horticultural department has received oranges and a small orange-like fruit, from F. C. Reimer, of Florida. The class in pomology has studied them carefully, and also had the pleasure of making practical tests. Chestnuts, hazel nuts, filberts and walnuts have been sent from South Haven for the same purpose.

The Boarding Club Association has modified its constitution to the extent that hereafter all supplies will be purchased by a special agent. Until now, each steward and frequently the different cooks have bought material from the different stores in Lansing and East Lansing. While reductions have been secured from the regular retail price, still nothing like wholesale prices have prevailed. It is now proposed to do all buying from wholesale establishments. An experienced man will be secured and the work will begin next January. The total purchases do not vary much from $1,000 per week for the college year. The clubs can save a great deal if a business man can be obtained.

Instructor Michels has a very interesting plan for a modern creamery. Complete drawings can be found at the dairy building. The idea is to supply cream for a fireproof brick building with galvanized iron roof and having a capacity of 5,000 pounds per day. The total cost of the building will be about $10,000 and the equipment will cost about $2,000. There is much need throughout the state for correct and modern plans. Creameries are going up rapidly, fires are numerous and many times some very important details are inconveniently arranged. With regard to the future of agriculture, Michigan is far ahead of this in point of number of students who are interested in it. Every college has a Dairy Club.
Loren P. Fimple was united in marriage to Miss S. D. Marvin of Sandusky, Ohio, on October 21, 1916. The ceremony was performed at the home of the bride’s parents in Sandusky Valley near Lake Erie, Ohio. Mr. and Mrs. Fimple left for a trip east, during which they will visit Washington and other places of interest. The Record extends congratulations.

E. H. Gallup is studying educational philosophy in Ann Arbor. He expects to remain there for some time and specialize along educational lines.

L. R. Munsen has recently been promoted to Chief of Contracts Laboratory, Department of Agriculture, Bureau of Chemistry. All contract work is handled by his department. At present he is working on printing inks.

With '97.

D. F. Pagen is a successful attorney at Grand Haven, Mich. He recently had three cases in the supreme court and won all three.

Instructor Holbrook, who has charge of the department of physics at present, gave a very interesting and entertaining lecture on the X-ray and other interesting subjects last Wednesday evening. The lecture room was crowded and all enjoyed the practical work as well as the explanation of the science. The lecture will be repeated for young men next Thursday evening and a general invitation is extended. All students interested in these modern developments in physics should not fail to be present.

"Why does Michigan rank first in the production of beet sugar? We have no better climate, soil, or weather conditions for beet growing than many other states. We win be satisfied with the results of the last few seasons, which are the most satisfactory year of our Agricultural College, put his brain, love, and energy into the work. He was a product of Michigan schools and his work is of enough value to the state to repay the cost of educating all the children of the state for 20 years or more."

The following is taken from the annual report of the Inspector General to the Secretary of War.

General Orders, No. 6, War Department, Washington, August 24, 1905, will doubtless mark an important page in the history of the military instruction at civil schools and colleges. Briefly summarized, it provides for the appointment of six honor graduates to second lieutenancies in the Regular Army from state normal schools; provided that sufficient vacancies exist after exhausting the graduates of the Military Academy at West Point and the successful competitors among the enlisted men. This will assuredly supply a long felt want in the nature of a healthy material incentive for students to take the military course. Hereafter the military department could offer no reward to those possessing a practical knowledge of military matters, acquired, perhaps, at sacrifice and neglect of other branches of learning which offer larger fields of usefulness after life. But hereafter, under the provisions of this order, the cadets having the highest standing in the military department could look forward to the promise of a commission in the Army, with all its significance implies.

card

THE Tau Beta Pi is an honorary fraternity of the engineering department. Its membership is limited to one-eighth of the junior class and one-fourth of the senior class. Scholarship is the principal requirement for membership. Messrs. Adelman, Gardner and Curney of the senior class and Mr. H. S. Hines of the junior class were recently admitted. The present officers are: E. S. Johnson, Pres.; E. Balbesch, V. Pres. and Treas.; W. P. Carton, Rec.; H. G. Walker, Cor. Sec.
