OLIVET — ALMA — M. A. C. TRACK MEET.

On Saturday of this week, at 2 o'clock, will occur the annual triangular track meet—Alma—Olivet—M. A. C.—on the home track. This is always an interesting event, and this year it is understood the teams are pretty well matched. A good contest is assured, as will be seen by the following schedule of M. A. C. entries. We shall be well represented, and should be able to carry off the honors.

OUR ENTRIES.

100-yd. Dash—Leonard, Sears, Coox.
Bread Jump—Beatty, Friar, Smith.
Two Mile—Gehl, Rosen, Mooney.
120-yd. Hurdle—Beatty, Friar, Julian.
High Jump—Lord, Loveland, Julian, R. A. Warner.
One-half Mile—Brown, Myers, Chamberlain.

200-yd. Hardball—Corry, Beatty.
Pole Vault—Beatty, Loveland, R. A. Warner.

Discus—McLaugherty, Gilbert, Leonard.
Mile—Gehl, Rosen, Mooney.

The constellation relay will also be run by Leonard, Sears, Clayton, and Warner. This promises to be a feature, and worth the price of the meet. A charge of twenty-five cents only will be made. No base-ball Saturday and everybody goes to the meet.

ALMA DEBATE.

The debating team, consisting of Miss C. R. Sander and Mr. Coat, were defeated by Alma Friday evening. The team was accompanied by Harry. Byrd, instructor Hensel and Bittner, and Alternate Reader. M. A. C. debated the negative side of the question—a graduated income tax. It was simply a contest between men of mature years, who were experienced debaters, and a team composed of men of little or no experience in public debate and the former won. Alma’s team was composed of two juniors and one senior; M. A. C. was represented by one sophomore and two freshmen.

In spite of the above fact, our team showed as good or better understanding of the subject than did their opponents. The boys have worked hard and long, and deserve credit for the work accomplished. The labor is by no means lost because of the decision, and in these men we have timber for excellent future debates.

1ot

Miss Alice Climer, in charge of the credit union, was present in the public schools at Battle Creek, was a college visitor over Sunday.

MAY FESTIVAL.

The big event of the week is the Ninth Annual May Festival to be held in the pavilion of the Agricultural Building Friday of this week. Two concerts are to be given, one at 2:30 and one at 8:00 in the evening.

In the evening the chorus, consisting of 40 voices and twelve of the members of the Lansing Choral Union will render Max Bech’s famous “Arminia.” The stirring war songs demand volume and are admirably adapted to the large chorus. Every member of the chorus has been working hard and under the excellent direction of Mr. Killican, indications are that the coming performance will eclipse all previous efforts.

Ellison Van Hoose, tenor, who sings at Ann Arbor and Cincinnati festivals this year, stands in the front rank of tenors in this country. He is a member of the Chicago Grand Opera Company.

Martha Hecender, a woman, who is a native of Michigan, was music in 1908, and has filled many important engagements with the country’s leading organizations.

Herbert Miller, baritone, is considered one of Chicago’s best singers, and his recent successes have brought him rapidly into prominence.

The committee having this work in charge are preparing a souvenir program, which will contain all the songs rendered, and pictures of the soloists.

It is hoped that every college man and woman will take a personal interest in this event, and help to make it a success. Tickets are now on sale at the secretary’s office. Be sure and make reservations.

THE MILITARY INSPECTION.

Tuesday, May 14, was an ideal day for the annual military inspection at M. A. C., at least so far as the weather was concerned. The men worked hard and long, and the annual inspection day, and the uniforms were not at all uncomfortable.

Quite a large number of Lansing people, as well as those of the college community, witnessed the review.

The first in order was inspection of the corps preceded by review, and this was followed by company and battalion drills in close formation and extended order, an exhibition in signaling by the signal corps, a litter corps, and a few moments with the band.

Following this came some field exercises. First, the reviewing officer saw an attack by the first battalion, advance guard by the second, and out-post duty by the Red Cedar river by the third.

Capt. Harrison Hall, of the general staff, was the inspecting officer, and expressed himself as well pleased with the work being done, stating that the boys had a very good understanding of field exercises, and the work was especially creditable when the fact that so short a time had been available for training was taken into consideration.

The inspection was followed by the usual competitive drill by companies. Everyone did unusually well, and the comments upon the work of each was most favorable.

First place went to Co. C, with W. A. McDonald captain; second to Co. A, with Capt. E. C. Blake captain, and third to L, in charge of Capt. M. J. Gearing. Capt. McDonald will have charge of the regimental gold medal during the remainder of the term, and it will remain the property of Co. C until the next inspection.

HOME ECONOMICS ASSOCIATION.

The Michigan Home Economics Association met at M. A. C. on Saturday, May 18. About 60 ladies attended the Women’s Building at 12:30, the senior girls serving. The meeting convened at 2 o’clock, which time reports of the various committees were given. Miss Keene, of Detroit, on the technical work in home economics done in high schools; a second by Miss Pratt, director of domestic science in the Kalamazoo schools, on the course of study in the normal schools. This committee, as also the previous one, is to work until the next meeting. Miss Stevens reported, on pure yeast of standard value, growing in this subject. This committee was also continued.

Following these reports, the meeting was addressed by Miss Mary S. Snow, supervisor of household arts, Chicago, on the subject, “Beauty in Ordinary Home Environment.” Miss Snow was for many years a resident f schools in the city of Bangor, Me.; nine years supervisor of practice teaching and instructor in normal methods in the domestic science department of Pratt Institute, and is now inaugurating a new order of things in the Chicago schools.

The address was illustrated by a large number of colored slides, with Prof. Pettit in charge of the machine. The slides included some beautiful buildings and residences, showing ideal sites and surroundings. A number of bowls, pottery of various sorts, draperies, floor coverings, and useful utensils of the home were among other views shown.

The committee gathered in Prof. Pettit’s lecture room for this address, and Miss Snow stated that the latter slides had been shown to so good an advantage as they were in this particular case.

The gathering was a representative one, including teachers, dietitians, students and housekeepers.

Mrs. Lucy Whitfield Williams, of Lapeer, president of Michigan State Federation of Women’s Clubs, was among the guests.

HORT. CLUB.

Professor Pettit gave an exceptionally interesting lecture on “Bees” before the Hort. Club Tuesday evening. The subject was handled by Dr. A. H. B. Sperry, of the Entomology building. He began with the origin and history of the present honey bees, giving the characters of each type and the results of crosses, also the development of housing conveniences from the hollow log of very early times, the straw dome, box hive and movable frames to the present broad chamber and super.

The queen is, of course, the most important member of the hive. Her life-time is three years, of which the second is the most important. She lays from two to three thousand eggs per day through the laying season, fertilizing them or not as she pleases. If one of the eggs hatch into drones or males, the fertilized into females whose sex organs do not develop; they may lay drone eggs, however. All larvae are first fed “royal jelly,” a secretion from the glands of the workers. When the bees desire a new queen they continue feeding this until the larva which has hatched in a special cell, while

(Continued on page 12)
that beeo defillitely upon the material will conform to that used in other buildings and ins.

The university went down to defeat Saturday on their home grounds and before an immense crowd to the tune of 5 to 1. It was readily seen by the comparative playing of the two teams May 3 that M. A. C. had the best balanced team, and the second defeat of the season for the high school but adds emphasis to this belief.

While Michigan was very erratic at times, this did not win the game for M. A. C., as is readily seen by the summary. Dodge pitched a wonderful game, allowing but three hits and he had also the support of his mates in every inning. On the other hand, two of Michigan's pitchers were batted freely, the home team registering a total of ten hits. Michigan was connected on the team connected with the ball during the contest, and men were on base almost continuously. Dodge's duel with the U. of M. men guessing at all times, and his work in the box was a master stroke.

For Ann Arbor, Beller featured with a long throw to home plate, and Michigan's runners also scored. He技術 throws to second, getting four M. A. C. men at these.

In their half of the third, M. A. C. made four. With one down, Reimann had on base; error; Dodge was safe on Baribeau's error, Bradley single, scoring Binns and Groening double, scoring Dodge. Maggip big single, scoring Bradley, and when Rogers drove the third wild to second, Groening came home.

In the eighth they added to this with two outs, Groening single, and Dawson followed suit. Laverns throw wild to catch Griggs at third, and he scored.

The object

WABASH DEFEATED.

M. A. C. added another victory to her already good list on Friday by defeating Wabash on the home field.

M. A. C. started the scoring in the first inning, when one tally was registered. In the fourth, with the aid of plenty of hits and some errors on the part of the visitors, the home team counted more five, and came across with an added six in the pair in the seventh.

The visitors scored one in the ninth, and by a lucky happening of hits in the eighth this was increased by three. Three Wabash players were out, but the home team were able to find them all, registering a total of 15 hits during the eight trials at bat.

Brady played his usual star game at 2B, and, in addition, secured four hits in four times at bat, and followed it up with three runs. Griggs, at first, made a sensational unassisted grab of Stanley's lazy drive over his corner, and played his usual game throughout.

Schoen was in good form, mixing his delivery in a way which showed a steady hand and control.

Wabash 0 0 0 0 0 5 0 0
M. A. C. 0 0 0 0 0 0 5 0

This is the last home contest under the new Olivet game on Saturday, June 1, when the crimson players will endeavor to "come back" for their defeat early in the season.

This week the team will be kept busy away from home. The boys have tonight at 7:05, arriving in Detroit at 9:10; leave this point at 10:45 and arrive in Cleveland, Ohio, Wednesday morning at 6:35, where at 7:30 they will play the return game with the Ohio boys.

On Thursday morning the party will leave on the Big Four for Cleveland, arriving at that point at 11 o'clock. Here they play the Western Reserve at 4 o'clock, and leave by D. & C. boat Thursday night for Detroit. They will be at home on the 10:58 p.m. Friday, and we expect to two more victories.

ABOUT THE CAMPUS

Dr. Blaisdell made a business trip to Detroit on Wednesday of last week.

A new garage is being constructed for our electric truck recently purchased. The building is east of and adjoining the paint shop.

The poultry department reports 1,000 little chicks and expects to hatch practically that many more. From this number a flock of 800 will be selected to winter over.

Miss Lima B. Huston, a recent graduate of the Chicago College of Expression, is visiting her brother Prof. R. C. Huston of our chemical department, and will probably remain at M. A. C. for the summer.

Le Roy L. Jones writes from the University of Georgia that strawberries and hot weather reminded him of the 1912 commencement at M. A. C. He is enjoying his work at Athens very much, and regrets that he will not be able to commence for commencement.

The Y. W. C. A. listened to a very interesting address Thursday evening by Mrs. Holland on the work being done at the children's home in St. Joseph. This is a private institution and is meeting the needs of a certain class of children not provided for by our state institutions. About 40 girls were present at this meeting, and on Saturday carried out the scheme heretofore followed of tag day, except in this case flowers instead of tags were used, the day being known as "flower day."

Prof. Kelzke has so far recovered as to be able to be down stairs and use his telephone.

Prof. J. Fred Baker, of our forestry department, was called to his old home Thursday of last week on account of the death of his father.

J. Lynn Thomas, '15, of College Station, Texas, writes that he expects to be at M. A. C. for the Graduate School of Agriculture, and will bring five or six of his college friends with him.

The construction of three new houses for Mr. Sexley is being pushed rapidly, two of which are already enclosed. Rev. Steensma will occupy the first facing Abbot Road and M. F. Johnson has spoken for the one facing Albert Ave.

The council of East Lansing has been requested to consider the matter of lower water rates for the city during the summer months in order to encourage the use of water on lawns and thus aid in beautifying the city in general. The council need do no doubt take this matter up in the near future.

Since there has been considerable agitation of late concerning a picture of all the varsity men in their monogram sweaters, it has been decided to carry out the plan. "Any" Bliss will take the picture on Saturday morning, May 25, at 8 o'clock, on the drill grounds. All varsity men of the football, basketball and baseball track and tennis teams are requested to be present with their monogram sweaters.

Prof. Kunze's house phone has been changed from 9500 to 9506.

A. E. Kaisell, a freshman agricultural student from Escanaba, is ill in the Lansing hospital.

Harry Kempater, of Missouri, writes that he will surely be on hand at the International Poultry Association meeting held at M. A. C. in June.

The May number of the American Journal of Veterinary Medicine, Chicago, contains an article by Dean R. P. Lymann on the subject "Differentiation of Various So-called Colica of the Sooliped."

The State Board of Education will grant to certain M. A. C. students this year, sixty state certificates (4-yr.) and eleven life certificates. These are granted upon recommendation of our Department of Agricultural Education.

Instructor Linton goes to Detroit Wednesday of this week, where he will attend a meeting of the Michigan Poultry, Butter and Egg Carload Shippers' Association, an organization for the improvement of quality of these products in Michigan.

Mr. R. L. Nyce, who came to M. A. C. from the Detroit Schools two years ago in order to pursue his studies in agriculture, was, by recent act of the Board, made assistant professor of agricultural education, and will aid Prof. French in spreading the gospel of agriculture throughout the high schools in the state.

Prof. and Mrs. Ryder are at Marshall, Mich., on account of the illness of the latter's father.

Clerk R. J. Baldwin, of Dean Shaw's office, H. Foley Tuttle, and Miss Edna Preston, of the Lansing public schools, spent Saturday and Sunday at the home of Miss Gertrude Sibert, Grand Blanc.

Field Agent O. K. White was busy in the western part of the state during the past week, carrying on demonstration in spraying and otherwise aiding the fruit growers in getting ready for the fall crop.

On Wednesday afternoon Dean Gilchrist entertained in honor of her sister, Mrs. Joseph Holmes Allen, and little daughter, Josephine, of Pocahontas, Iowa, who are spending several weeks at the women's building.

Arrangements have been made whereby the members of the junior class in Vet. Science have been taken care of for the summer vacation. Lewis Willeden will remain at the college and help in the care of the laboratory and clinic which will be kept intact during the summer.

H. N. Beeman expects to be associated with a practitioner in Flushing.

S. H. Regenos has made arrangements to spend the summer with Dr. S. Brenton, president of the American Veterinary Association, Detroit, and H. L. Cotton is contemplating arrangements with a local veterinarian.

"ASSURED STYLES" INDEED!

A visit to our Women's Department will help you to solve the perplexing question—What to buy this spring? A Suit, or Dress, or Coat?

The Mark of Quality and of Fashion plus Skill stamps each of our Garments the better kind.

Women's tempting new Spring Suits, Silk and Wool Dresses, Coats, Skirts or Waist. Each day adds many bright things to our collection. Early spring buyers always find the best assortments. Our styles bear the desirable individuality every lady wants.

CAPT. IRELAND AND THE U. S. ARM.

(Continued from page 1-)

government go to pieces under the stress of circumstances, you must be prepared to take up your part of the military government and run it honestly and efficiently where the methods of civil life made to fit peace conditions have failed. You may have the street railways, water, sewer, and fire fighting systems of a great city to handle, or it may be the judicial, law-making, and police systems, or the administration of taxation and custom systems. You may be dispensing international law on the border, dynamiting buildings and punishing looting in a stricken San Francisco. Whatever it may be, no matter how unexpectedly it comes, you must measure up to the emergency. All this means careful preparation. Young will not be an insufficient stimulating career. Your only regret will be that you did not leave M. L. C. better equipped.

The advantage of a commission is that you enter your life work in an administratively capable commission that is, upon the professional and social plan of the superintending class. By not having to go through the several stages of the employee class from "hand" to "sub-superintendent" you escape your limitations in the way of promotion and opportunity, but by no means do you escape knowing what they are paid to know and do. Our clerks, stenographers, accountants, foremen, engineers, electricians, draftsmen and surveyors are commissioned staff officers, paid proportionately to the rates of civil life. If we are paid off, the commission starts professionally in a rank above them, is required to know the business better than they do themselves and, after proper secon- ding, superintends their work. You start higher than any of promotion to the place, where you will be paid solely for what your head thinks, and not partially for mental machinery and partly manual dexterity necessary to the accomplishment of a given work.

If you can meet the requirements there is little danger of your having sufficient time to learn back and con- gratulate yourself on being made of a little better clay than "so-and-so." If you take that part of the congrat- ulation yourself upon the opportuni- ty ahead of you, your competitors will have passed you, and you will have slidden against the democratic spirit of the service which stands for equal opportunity for all, whether he be enlisted man, officer, or civilian.

Upon the assurance of the weather- experts that there would be a frost next night, West Cape, Prof. Gustave and Field Agent White hurried to Saginaw to make observ- ation in an orchard which had been equipped for heating to ward off danger from frosts. After an all-night vigil both, and with thermometer reading, the men left without witnessing a frost, and with the satisfaction that the orchard did not lose its crop. About 2 a.m., the thermometer registered about 54° F. A half hour later the sky was overcast with heavy clouds, and the temperature from this time on increased with every rolling. At 4 o'clock about 21 poa containing crude oil were lighted just to the note the effect. The temperature in this particular area increased degrees within a very short time, very short, showing conclusively the benefits obtained when danger from frost is imminent.

HART. CLUB.

(Continued from page 1-)

all others are fed "bee bread," which the bees make from the pol- len of flowers. Professor Pettit also discussed some of the best methods of wintering, treatment of bee diseases, commercial importance of honey, and the relation of bees to fruit trees. He would not advise one to go into bee keeping on a large scale without careful study.

The following books were recom- mended as being among the best to be found on this subject: - A B C and X Y Z of Bee Culture," "How to Keep Bees for Profit," etc.

At the close of the talk all were interested in a series of new lantern slides illustrating the native method of silk manufacture in Japan, and contrasting it with the present com- mercial method using improved American machinery.
